

## Instructions for using the BMC Shoulder Sling Strap

The BMC Shoulder Sling Strap keeps all larger BMC blades slung comfortably and ready for instant deployment.

If you get a BMC blade with a Kydex sheath, it will have a very sturdy belt Dangler rig made of sturdy leather and a heavy duty steel D-ring. This allows for the machete to be carried on either side of the belt. Although perfect for several hours of carry, the longer, more daring expeditions may benefit from a shoulder carry option. Enter the BMC Shoulder Sling Strap.

It can be slung over the neck or carried off one shoulder. It offers multiple adjustable buckles, two elasticated sections and heavy duty quick-release hooks for fast coupling/uncoupling to a sheath. The strap is also strong enough to have other accessories attached if so required.

When sold separately; the BMC Shoulder Sling Strap comes with one mounting assembly which is very easy to mount through a standard 6mm Sheath rivet, as used on our sheaths. You will need a 2.5mm Hex head screwdriver or Allen key. The remaining Strap hook is best attached to the top of the sheath via its inbuilt heavy-duty D-ring.

The BMC Shoulder Sling Strap is available in Black or Army Green.
